Acronis

Trusted cybersecurity and the best backup
for complete cyber protection

About US

- Acronis is a global technology company with headquarters in Switzerland and Singapore

- At Acronis, we protect the data, applications, systems and productivity of every organization – safeguarding them against cyberattacks, hardware failures, natural disasters and human errors.

- We empower service providers to protect their infrastructure and the infrastructure of their clients while maintaining high profit margins.

- We enable corporate IT teams and home office users to protect their business' critical infrastructure with high reliability and a low cost.

Features

Integrated antiransomware

Delivers greater security by detecting and stopping ransomware and cryptomining attacks in real time

Platform flexibility

Keeps data safe no matter where it lives: from laptops and mobile devices, to hypervisors, VMs, and more

Unmatched speed

Backs up to the cloud quicker: typically twice as fast – but up to 10 times as fast – as the competition

Features

End-to-end encryption

Ensures data privacy, at rest or in transit, with AES-256 encryption protected by user-defined passwords

Total control

Lets you manage backup and recovery efforts on your terms, including remote and mobile access

Reliable recovery

Ensures access to data with RTOs that independent tests show are twice as fast as the closest competitor

Acronis Cyber Protect Cloud

Advanced packs

- Empowering service providers with backup, DR, cybersecurity, and endpoint management in one integrated solution

Advanced Security

- Enhance your security services with integrated cyber protection that includes full-stack anti-malware.
- Increase your detection rate and responsiveness to the latest cyberthreats.
  Extend cyberprotection to web browsing, backed-up data, the recovery process, and exploit prevention.
  Enable investigations by capturing forensic data in backups.

- Full stack anti-malware

- URL filtering

- Exploit prevention

Advanced Backup

- Defend clients' data, even between scheduled backups.
- Extend backup capabilities to SAP HANA, Oracle DB, MariaDB, MySQL, and application clusters.
- You can also gain visibility into data-protection statuses across your clients' infrastructure.

- Continuous data protection

- Data protection map

- Off-host data processing

Advanced Disaster Recovery

- Get clients back to business in mere minutes when disaster strikes by spinning up their systems in the Acronis Cloud and restoring them anywhere, ensuring immediate data availability.
- Make disaster recovery painless and increase efficiency with orchestration, runbooks, and automatic failover.

- Disaster recovery orchestration

- Production failover

- Site-to-site VPN

Advanced Email Security

- Block any email threat, including spam, phishing, business email compromise (BEC), account takeover (ATO), advanced persistent threats (APTs), and zero days in seconds before it reaches end users.
- Leverage Perception Point's next-generation technology for lightning-fast detection and easy deployment, configuration, and management.

- Anti-phishing and anti-spoofing engines

- Anti-evasion and account takeover protection

- Next-generation dynamic detection against zero-days

Advanced Data Loss Prevention (DLP)

- Prevent leakage of sensitive data from endpoints via more than 70 local and network channels and strengthen compliance with minimal effort and speed to value.

- Content-aware data loss prevention

- Automatic client-specific DLP policy creation and extension

- Pre-build data classifiers for common regulatory frameworks

Advanced File Sync and Share

- Get a full control over data location, management and privacy with a file sync and share service, including a transaction ledger to enable notarization and eSignature capabilities, across all platforms.

- File notarization

- Embedded eSignatures

- Independent file verification

Advanced Management

- Streamline and automate your routine tasks via scripting and promptly close security gaps in clients' infrastructure through patch management.
- Gain visibility into your clients' software assets and data protection to ease daily tracking and planning tasks, and improve clients' uptime by monitoring disk drives health.

- Cyber scripting

- Automated patch management

- Disk drive health monitor
